

WEXO Code Challenge API

Task	Best-case estimate tid	The most likely estimate	The worst-case estimate	Realiseret tid
A frontpage showcasing the genres	4 hours	6 hours	7 hours	23 hours
Gerne page	2 hours	4 hours One page (template) and dynamically changes the content based on the selected genre	5 horus	4 hours
movie model	2 hours	3 hours	4 hours	30 min
Session	1 hours	3 hours I haven't worked much with sessions, and it seems a bit complicated with the API. we need some sort of login page	4 hours	
Wishlist	1 hours	2 hours In the API, there is a watchlist which I'm thinking of using for that if session is to works	4 hours	
Responsive Design	2 hours	4 hours	6 hours	2 hours
Search bar	1 hours	2 hours	3 hours	
Total	13 hours	24 hours	33 hours	31 timer 30 min

The weighted average estimate (E) is **23.67 hours**.

I have add a Realiseret tid to keep track how long i will use on different task

my modifications:

- **A button next to the title which links the user to a complete list of all the movies.**
I think would work better if genre titles at frontend page works as link shortcut see all movies for that genre instead of a button
- **A page presenting all information available about a movie.**
It would be more user friendly if model pop open instead of getting move to new page

my additions:

- I would like to make so you search after a movie with search bar

I count on being done on the 22-01 and have booked a meeting on the 27-01. When I am done I will send mail confirming the end of coding.
